

## Mounting PV systems

### What we offer to our clients...?

Prefabrication of steel mounting systems for solar panels.

Following our moto “Promptness and high quality at the best price” as our main goal for optimization, we achieve extremely good results in:

- Design of steel mounting PV systems on the base of our clients requirements and specifications;
- Optimization of the design projects of steel mounting PV systems on existing design drawings and prior prefabrication stages;
- Prefabrication of steel mounting PV systems, designed by our in-house R&D department;
- Prefabrication of steel mounting PV systems and components according to our customers design projects.
- Installation of steel mounting PV systems;
- High quality.

### What are our expectations?

In the course of development of our campaign called “STRIMONA OUTSOURCING”, which is based on the favorably business and investment atmosphere in Bulgaria we are ready to receive inquiries and expect an interest to be shown towards us in relation to:

- Assigning of prefabrication of steel mounting systems according design project of out customers or our company designed projects;
- Prefabrication of steel mounting systems in collaboration with european companies acting in the field of construction of facilities of alternative renewable energy sources;
- Co-investments with european partners in engineering and prefabrication of steel mounting PV systems on the territory of Bulgaria.

The right partner ...  
...for every project!

STRIMONA is a company with main activity of prefabrication and installation of steel structures for industrial buildings, warehouses and commercial buildings. In the past year the company started to prefabricate steel mounting PV systems.
